WEEKLY MORBIDITY REPORT  
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

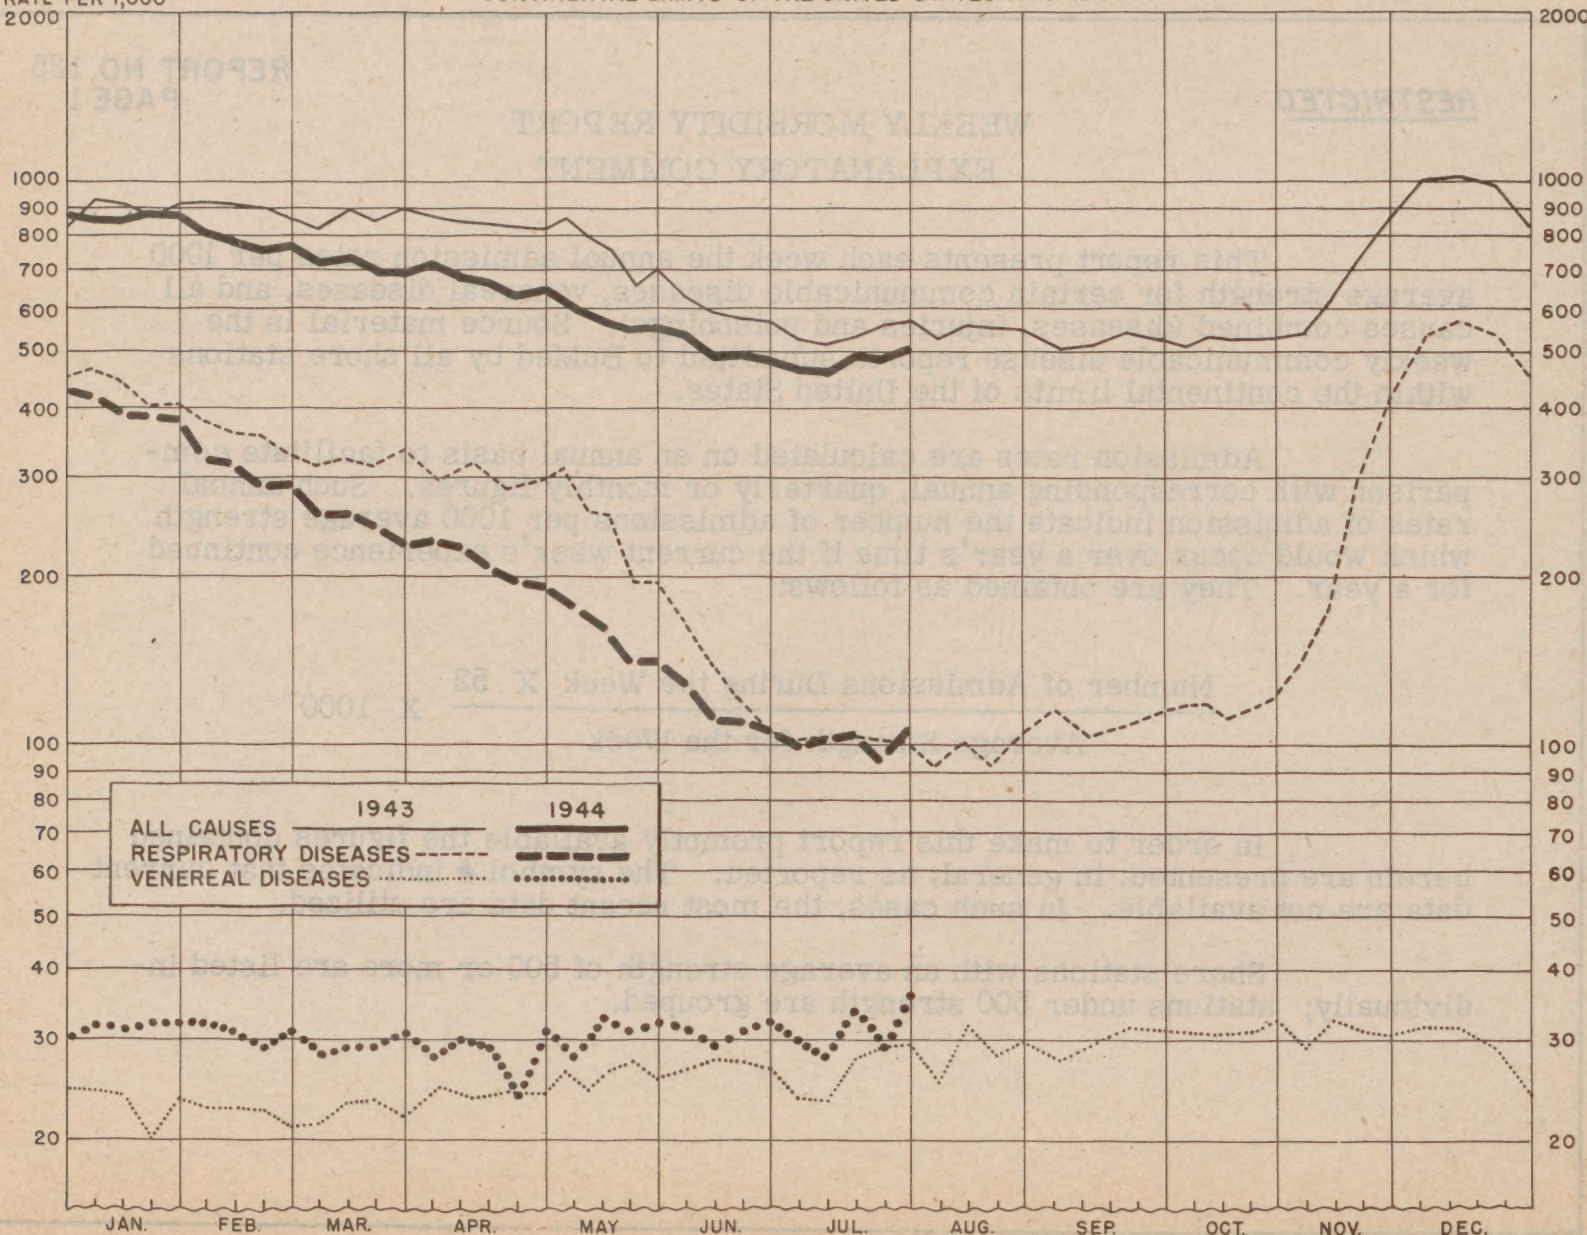

RESTRICTED

FIGURE 1  
ANNUAL ADMISSION RATES PER 1,000 AVERAGE STRENGTH, BY WEEKS  
FOR CERTAIN RESPIRATORY DISEASES, VENEREAL DISEASES, & ALL CAUSES,  
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 135  
PAGE 2

RATE PER 1,000  
2000

\* INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;  
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;  
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

Week Ending 29 Jul 1944

The admission rate for All Causes rose this week bringing the curve back above the 500 level. The curve still continues to stand, however, below the 1943 curve for the corresponding period. The highest rate (896) was reported for the Potomac and Severn Commands, the lowest (405) for the 12th District.

The respiratory disease curve rose sharply this week and for the first time in 1944 definitely stood above the 1943 curve for the corresponding week. The curve turned upward in all Districts except the 4th, 6th, and 11th Districts. The highest rate (188) was reported for the 13th District, the lowest (68) for the 4th District.

The venereal disease curve rose this week to the highest point recorded in either 1943 or 1944 to date. The highest rate (62) was reported for the 4th District, the lowest (25) for the 1st District.

Influenza and Catarrhal Fever. A slight rise in the rate for these infections occurred this week but the curve has stood at a level between 60 and 70 since the week ending June 17th and is well below both the 1942 and 1943 curves for the corresponding period. The highest rate (99) was reported for the 3rd District, the lowest (36) for the 4th District.

Pneumonia--Broncho and Lobar. For the fifth consecutive week the rate for these infections has been reported at 1. The curve stands well below the 1942 and 1943 curves for the corresponding period. The highest rate (5) was reported for the 4th District; the 6th and 7th Districts reported no cases.

Pneumonia, Atypical. The rate for this infection was reported for the eleventh consecutive week at 2. The highest rate (6) was reported for the 8th and 11th Districts. The 4th, 12th, and 13th Districts reported no cases.

Tonsillitis and Pharyngitis, Acute. The rate for these infections rose this week

CURRENT TRENDS--CONTD.

bringing the curve back to the level of the week ending June 10th. The highest rate (96) was reported for the Potomac and Severn River Commands, the lowest (22) for the 12th District.

Rheumatic Fever, Acute. The rheumatic fever rate was again reported at 1. This compares favorably with the rate of 1.2 for the corresponding week of 1943. The highest rate (9) was reported for the 13th District. No other District reported a rate over 2 and six Districts reported no cases.

Scarlet Fever. The scarlet fever curve having leveled off at 3 through the month of June has dropped closer to 2 through July. It would appear, however, that the mid-summer low will not fall much below 2.0 while in 1942 the curve dropped in mid-summer below .01. Only in the 13th District is this disease now a problem, the rate for the week in that District being reported at 30. No other District reported a rate over 1.0.

Cerebrospinal Fever, Meningococcic. The rate for this infection rose slightly this week to 0.15. This compares favorably with a rate of 0.2 for the corresponding week of 1943. Seven Districts and the Potomac and Severn Commands reported no cases.

Malaria. After a rise to 3 two weeks previously the rate has returned to 2. This compares with a rate of 0.6 in 1942, and a rate of 5.6 in 1943. The highest rate (6) was reported for the 1st District and the Potomac and Severn River Commands. The 7th District reported no cases.

Measles. For the sixth consecutive week the measles rate was reported at 2. This compares with a 1943 rate of 2.0 and a 1942 rate of 1.1 for the corresponding week. The 13th District reported the highest rate (7). The 4th, 6th, and 7th Districts and the Potomac and Severn River Commands reported no cases.

Poliomyelitis, Acute Anterior. One case of poliomyelitis was reported for the week, from the 9th District. The cumulative total of poliomyelitis cases for all Districts since Jan. 1, 1944 is 17.
